This item is printed on demand - Print on Demand Neuware - Salinity and drought are the two most common abiotic stress conditions which have devastated growth and yield of crop plants. Though, plants bestowed with the capability to respond to abiotic stress via signal transduction pathways by adjusting their metabolism. A defensive strategy of plants against such stressful events encompasses a cascade of signals ranging from primary to secondary responses. In extreme environment, fungal symbioses with crops can influence various physiological adaptation and improve plant growth. Thus, reducing the adverse effects of stress. Among fungi, endophytic fungi are the fungal symbionts associated with plants, lives inside tissues or roots and can enhance plant growth during stress conditions. Such association in roots can change key features of plant physiology and mediate abiotic stress. Though, endophytes are novel source of biologically active metabolites but there are few reports elucidating the effects of plant growth regulator specially phytohormones producing endophytic fungi.
