

Orgocards Organic Chemistry Review

By Steven Q Wang M.D., Edward J Lee, Babak Razani

Barron's Educational Series, United States, 2002. Paperback. Book Condition: New. 188 x 145 mm. Language: English . Brand New Book. For years, college students in pre-med courses, or majoring in biology, chemical engineering, and many other science courses have searched for a study aid of this kind, but have come up empty-handed. Now, Barron's has precisely what they've been seeking! OrgoCards is a set of more than 160 5 1/2 x 7 cards that summarize reactions and reaction mechanisms in organic chemistry. A sophisticated variation on the time-proven flashcard method of study, the cards summarize organic reactions in 21 functional groups, such as alcohols and alkenes. Card number-one in each group outlines the group's physical and chemical properties. Each subsequent card explains a specific reaction, starting with a diagram of the reaction, and followed by a Keys section that summarizes the most important data related to this reaction. Following the list of Keys is a Notes section giving miscellaneous information. The back of each card contains a detailed reaction Mechanism, in both text and diagram forms. OrgoCards emphasize repetition and serve as aids to memorization to prepare students for examinations. These flashcard-style summaries highlight organic chemistry...
